Table of Contents

Macroeconomic Stability and Stock Market

Pakistan's macroeconomic outlook continues to improve. In July, S&P Global upgraded Pakistan's sovereign credit rating from B- to B, with a stable outlook. The upgrade may also support a more favorable assessment by other rating agencies, Fitch and Moody's in their subsequent reviews. The rating upgrade of Pakistan reflects stronger fiscal management and improving institutional conditions. External resilience has also strengthened, with SBP reserves reaching USD 17.0 billion as of 24th July. The central bank expects reserves to rise further to USD 20.2 billion by December 2026 and exceed USD 21 billion by June 2027. At its latest Monetary Policy Committee (MPC) meeting, the SBP maintained the policy rate at 11.5%, balancing the improving economic outlook against inflation, geopolitical developments and external-sector risks. Headline inflation eased to 9.2% in July, from 11.1% in June, while SBP expects inflation to moderate towards 5%-7% range by June 2027.

What This Could Mean for the Stock Market

Our analysis of monthly market valuation data from December 2006 to June 2026 suggests that periods of greater macroeconomic stability have historically been associated with higher stock-market valuations, as determined by the price-to-earnings (PE) multiple.

We assessed three indicators representing a stable economic environment:

- Inflation below 10%
- SBP reserves of at least USD 15 billion
- S&P Global sovereign rating of B or better

How Macroeconomic Conditions Have Historically Influenced Market PE

	Stable Environments	Challenging Environments
Average PE Range	9.0x to 12.8x	7.0x to 8.6x

The results demonstrate a clear historical association between greater macroeconomic stability and higher equity-market valuations. When macroeconomic conditions were not conducive, the market's PE range was 7.0x to 8.6x. As more supportive conditions were met, market valuations improved in the range of 9.0x to 12.8x. Considering that the present economic environment is stable, and stock market price-to-earnings ratio is around 8.0x, we believe that there is a strong case of upward re-rating, meaning potential upside of the stock market.

Stock Market Outlook

Pakistan has now met the reserve and sovereign-rating thresholds. A sustained return to single-digit inflation could provide an additional catalyst for a broader market re-rating. Further progress in fiscal discipline, tax-base expansion, energy-sector reforms, privatization and subsidy rationalization could strengthen investor confidence. Over time, lower interest rates may also encourage further shift in investor liquidity from fixed-income instruments towards equities. This could support market performance, particularly given the market's relatively limited free float and attractive dividend yields.

Pakistan's external position is supported by approximately USD 6 billion in external deposit rollovers, including the extension of Saudi Arabia's USD 5 billion deposit for a further period of three years. In addition, external debt servicing is projected to decline to USD 21.5 billion in FY27, from USD 26.5 billion in FY26, providing an important buffer against external shocks.

Risks and Our Investment View

The main near-term risk remains the ongoing conflict in the Middle East. A sustained increase in oil prices could place pressure on inflation, current account, the rupee, and interest rates. This could delay the improvement in market valuations. We believe that a peace settlement will be reached in the near future.

Overall, the improving macroeconomic environment supports a constructive medium- to long-term outlook for Pakistani equities. While short-term volatility may continue, investors may be better served by maintaining core equity allocations and using market corrections to add selectively, rather than attempting to time short-term market movements. "NBP Funds" equity strategies remain well positioned to participate in Pakistan's ongoing economic recovery and long-term growth potential.

Stock Market Review

After three consecutive months of positive returns, the KSE-100 Index declined by 2.3% MoM (4,208 points) in Jul-2026. Investor sentiment remained under pressure amid a renewed escalation in the US-Iran conflict, occurring days after the signing of the 60-day ceasefire under the Pakistan-mediated Islamabad Memorandum. The renewed hostilities resulted in another closure of the Strait of Hormuz, disrupting global oil supplies and driving crude prices sharply higher. Supply disruptions in the Red Sea (Bab el-Mandeb) further heightened concerns over global energy security. However, diplomatic efforts led by Pakistan and Qatar helped contain the conflict, resulting in a pause in military strikes by month-end.

Key Developments:

1. Renewed US-Iran tensions, shortly after the signing of the Pakistan-mediated Islamabad Memorandum ceasefire, led to another closure of the Strait of Hormuz and disruptions in the Red Sea, pushing global oil prices higher. Consequently, domestic MS and HSD prices increased by 12% and 26%, respectively.
2. S&P Global Ratings upgraded Pakistan's sovereign credit rating to 'B' from 'B-', restoring it to the level last seen in Feb-19. The upgrade reflected an improving external position, gradual macroeconomic stabilization, and a stable outlook.
3. The State Bank of Pakistan's Monetary Policy Committee (MPC) maintained the policy rate at 11.5%, citing the need to preserve the current monetary stance amid evolving inflation and external sector dynamics.

Macroeconomic Indicators:

1. **Inflation:** NCPI stood at 9.2% YoY in Jul-26 and increased by 1.2% MoM, primarily driven by Food & Non-Alcoholic Beverages.
2. **FBR Tax Collection:** FBR collected PKR 820bn in Jul-26 against a target of PKR 780bn, exceeding the target by PKR 40bn.
3. **Trade Balance:** The trade deficit narrowed to USD 3.9bn in Jul-26 from USD 4.7bn in Jun-26, reflecting a 15.2% MoM decline. The improvement was primarily driven by a sharp rebound in exports, which increased 31.1% MoM during the month.
4. **Current Account:** Current account deficit (CAD) of USD 649mn was recorded in Jun-26, primarily due to higher imports. Consequently, FY26 closed with a CAD of USD 139mn, compared with a surplus of USD 1,838mn in the previous year. The SBP expects the FY27 current account deficit to remain within 0%–1% of GDP.
5. **Remittances:** Workers' inflows stood at USD 3.5bn in Jun-26, compared with USD 3.4bn in the same period last year. Cumulatively, remittances reached USD 41.6bn during FY26.
6. **REER:** The Real Effective Exchange Rate increased to 106.44 in Jun-26 from 106.08 in May-26, indicating that PKR remains somewhat overvalued in real terms. Some currency adjustment may be required to preserve export competitiveness.
7. **SBP FX Interventions:** The SBP's net purchases stood at USD 635mn during Apr-2026. Cumulatively, the SBP purchased approximately USD 7.1bn during 10MFY26.

Sector Performance:

- **Outperformers:** Chemical, Commercial Banks, Food & Personal Care Product, Glass & Ceramics, Insurance, Inv. Banks / Inv. Cos. /, Modarabas, Paper & Boar, Real Estate Investment, Refinery, Technology & Communication, Tobacco
- **Underperformers:** Automobile Assembler, Automobile Parts & Accessories, Cable & Electrical Goods, Cement, Engineering, Fertilizer, Leather & Tanneries, Miscellaneous, Oil & Gas Exploration Companies, Oil & Gas Marketing Companies, Pharmaceuticals, Power Generation & Dis, Sugar & Allied Industrie, Textile Composite, Textile Spinning, Textile Weaving, Transport.

Investor Activity:

- Net buyers: Foreigners (USD 34 mn), Individuals (USD 24mn)
- Net sellers: Mutual funds (USD 30 mn), Companies (USD 14 mn)

Outlook: The equity market has delivered an exceptional cumulative return of approximately 335% during FY24–FY26, and we believe the structural investment case remains intact. The recent correction primarily reflects elevated geopolitical risks rather than any deterioration in Pakistan's underlying macroeconomic or corporate fundamentals. While higher oil prices may temporarily delay the monetary easing cycle, inflation is expected to moderate as energy-related pressures subside. Fiscal discipline under the FY27 Budget, continued progress under the IMF program, and strengthening institutional credibility continue to support macroeconomic stability. For medium- to long-term investors, maintaining core exposure and selectively adding during market weakness remains the preferred strategy, as disciplined allocation has historically outperformed attempts to navigate short-term volatility. NBP Funds' equity strategies remain well positioned to benefit from Pakistan's structural recovery and improving macroeconomic trajectory over the medium term.

Gold: Gold experienced a volatile month in Jul-26, with prices fluctuating amid changing expectations for U.S. monetary policy, mixed global economic data, and persistent geopolitical uncertainty. During the month, international gold prices traded within a range of USD 3,980.9/oz (PKR 452,776/tola) to USD 4,178.9/oz (PKR 473,328/tola). Price movements were primarily driven by shifting expectations regarding Federal Reserve rate cuts, fluctuations in the U.S. dollar and Treasury yields, and continued safe-haven demand amid geopolitical and trade-related uncertainties. Despite elevated volatility, sustained central bank purchases and resilient investor demand provided underlying support, reinforcing gold's role as a strategic hedge against inflation and macroeconomic uncertainty.

Money Market Review

Fixed Income: The State Bank of Pakistan (SBP) conducted two T-Bill auctions, targeting PKR 3.20trn against maturities of PKR 2.87trn. In the first auction, the SBP accepted PKR 1.92trn at cut-off yields of 11.40%, 11.40%, 11.44%, and 11.49% for the 1-month, 3-month, 6-month, and 12-month tenors, respectively. In the second auction, PKR 0.73trn was accepted at cut-off yields of 11.35%, 11.52%, 11.80%, and 11.99%, respectively. In the PIB Fixed auction, the SBP accepted PKR 458bn at cut-off yields of 11.45%, 11.49%, 11.63%, 12.14%, and 12.29% for the 2-year, 3-year, 5-year, 10-year, and 15-year tenors, respectively. Additionally, three GIS auctions conducted through the PSX mobilized PKR 635bn, with cut-off yields of 11.50% for the 3-month Fixed, 11.69% for the 6-month Fixed, 11.30%–11.84% for the 1-year Fixed, 11.40% for the 3-year Fixed, 11.58% for the 5-year Fixed, and 12.15% for the 10-year Zero-Coupon. The 10-year VRR was priced at spreads ranging from 0.10% to 0.19%.

Investment Objective

To provide stable income stream with preservation of capital by investing in AA and above rated banks and money market instruments.

Fund Manager Commentary

The Fund earned an annualized return of 10.4% p.a. during the month versus the Benchmark return of 11.3% p.a. Since its launch in February 2012, the Fund has generated an annualized return of 10.6% p.a. against the Benchmark return of 9.6% p.a. hence an out-performance of 1% p.a. This out-performance is net of management fee and all other expenses.

Being a money market scheme, the Fund has very restrictive investment guidelines. The authorized investments of the Fund include T-Bills, Bank Deposits and Money Market instruments. Minimum eligible rating is AA, while the Fund is not allowed to invest in any security exceeding six months maturity. The weighted average time to maturity of the Fund cannot exceed 90 days. The Fund is rated AA(f) by PACRA which denotes a very strong capacity to maintain relative stability in returns and low exposure to risks.

The weighted average time to maturity of the Fund is 54 days. We will rebalance the allocation of the Fund proactively based on the capital market outlook.

To provide a stable income stream by investing in bank deposits and money market instruments as specified in the offering document.

Fund Manager Commentary

The Fund earned an annualized return of 11.2% p.a. during the month versus the Benchmark return of 11.3% p.a.

Being a money market scheme, the Fund can investment in Government Securities (T-Bills & PIBs - not exceeding six months maturity), Short-term Debt Securities, Bank Deposits and Money Market instruments. Minimum eligible rating is AA, while the Fund is not allowed to invest in any security exceeding six months maturity. The weighted average time to maturity of the Fund cannot exceed 90 days. The Fund is rated AA(f) by PACRA which denotes a very strong capacity to maintain relative stability in returns and low exposure to risks.

The weighted average time to maturity of the Fund is 1 days. We will rebalance the allocation of the Fund proactively based on the capital market outlook.

Asset Manager Rating:	AM1 by PACRA (Very High Quality)

Investment Objective

To provide competitive return from portfolio of low credit risk by investing primarily in Government Securities.

Fund Manager Commentary

During the month under review, the Fund generated a return of 9.4% p.a. against the Benchmark return of 11.3% p.a. However, since its launch in July 2014, the Fund offered an annualized return of 11.7% p.a. against the Benchmark return of 11.0% p.a., hence an out-performance of 0.7% p.a. This out-performance is net of management fee and all other expenses.

NBP Government Securities Savings Fund (NGSSF) invests a minimum of 70% in Government Securities. The Fund invests a minimum 10% of its assets in less than 90 days T-Bills or saving accounts with banks, which enhances liquidity profile of the Fund.

As the asset allocation of the Fund shows, exposure in Government Securities was around 79% of Net Assets at the end of the month. Last one year allocation in Government Securities was around 85% of Net Assets. The weighted average time-to-maturity of the Fund is around 1.4 years.

We will rebalance the allocation of the Fund proactively based on the capital market outlook.

Subscription:	Income Unit: Rs. 100,000/-
Asset Manager Rating:	AM1 by PACRA (Very High Quality)

Investment Objective

To minimize risk, preserve capital and generate a reasonable return along with a high degree of liquidity from a portfolio primarily constituted of bank deposits and money market instruments.

Fund Manager Commentary

The Fund earned an annualized return of 11% p.a. during the month versus the Benchmark return of 11% p.a. Since its launch in November 2009, the Fund has offered an annualized return of 10.6% p.a. against the Benchmark return of 9.9% p.a. hence an out-performance of 0.7% p.a. This out-performance is net of management fee and all other expenses.

The Fund is allowed to invest in Government Securities up to a maximum duration of 6 months and in money market instruments. The Fund invests 25% of its net assets in less than 90 days T-Bills or saving accounts with banks, which further enhances liquidity profile of the Fund.

The portfolio of NMAF is around 42% of Net Assets invested in Government Securities. The weighted average time to maturity of the entire Fund is around 16 days. Our internal guidelines permit MTS financing in only fundamentally strong companies with lower volatility. It is pertinent to mention that in this asset class the Fund provides financing at only pre-determined rates of return with no direct exposure to the stock market.

We will rebalance the allocation of the Fund proactively based on the capital market outlook.

Investment Objective

To provide income enhancement and preservation of capital by investing in prime quality Financial Sector TFCs/Sukuks, Bank deposits and short-term money market instruments.

Fund Manager Commentary

The Fund generated an annualized return of 10.8% p.a. during the month versus the Benchmark return of 11.0% p.a. Since its launch in October 2011, the Fund has generated an annualized return of 11.2% p.a. against the Benchmark return of 10.7% p.a., hence an out-performance of 0.5% p.a. This out-performance is net of management fee and all other expenses.

The Fund is unique as it invests a minimum 70% of its assets in Financial Sector (mainly banks) debt securities, instruments or deposits. The minimum entity rating of issuers of debt securities is "AA-". This minimizes credit risk and at the same time enhances liquidity of the Fund. Duration of the overall portfolio cannot be more than one year. This minimizes interest rate or pricing risk.

Exposure in Corporate TFC and Ijarah Sukuk is around 3.5% of Net Assets at the end of the month with average time to maturity of around 5.2 years. The TFC portfolio of the Fund is predominantly floating rate linked to KIBOR. The weighted average time-to-maturity of the Fund is around 0.5 year.

We will rebalance the allocation of the Fund proactively based on the capital market outlook.

Investment Objective

To provide income enhancement by investing in Financial Sector TFCs / Sukuks, Bank Deposits and short-term money market instruments.

Fund Manager Commentary

The Fund generated an annualized return of 11.3% p.a. during the month versus the Benchmark return of 11.0% p.a., Since its launch in Apr 2026, the Fund has generated an annualized return of 11.3% p.a. against the Benchmark return of 11.2% p.a.

The Fund, besides investing in Government securities, debt securities and placements with Banks & DFIs - with the entity rating of "A" and above - can also invest in MTS and Spread transactions. This minimizes credit risk and at the same time enhances liquidity of the Fund.

NFSIPF allocation at the end of the month was around 91% of Net Assets in bank deposit and 6% placement with banks, respectively. The weighted average time-to-maturity of the Fund is around 4 days.

We will rebalance the allocation of the Fund proactively based on the capital market outlook.

Investment Objective

To seek maximum possible preservation of capital and a reasonable rate of return via investing primarily in money market & debt securities having good credit rating and liquidity.

Fund Manager Commentary

The Fund posted an annualized return of 10.2% p.a. during the month versus the Benchmark return of 11% p.a. The reported return is net of management fee and all other expenses.

The weighted average time to maturity of the Fund is around 0.6 year. The Fund's sector allocation is fairly diversified with exposure to Banking, Financial Service, Sugar & Allied Industries and Power Generation & Distribution. TFC portfolio of the Fund is predominantly floating rate linked to KIBOR. However, since TFCs prices may go up or down, therefore, only investors with medium-term investment horizon are advised to invest in this Fund.

We will rebalance the allocation of the Fund proactively based on the capital market outlook.
